Performance highlights – Q2 2024

The Evelyn Partners International MPS range continued to deliver positive returns, ranging from 1.0% to 2.0%, as all major asset classes contributed positively. Emerging market equities outperformed developed markets, with notable strength coming from Taiwan and India. Stocks related to the artificial intelligence (AI) theme continued to perform well. The European Central Bank cut interest rates, while other major central banks kept rates on hold due to sticky inflation.

In the UK, the Labour party secured a landslide victory that marked the largest government majority since 1832. These results aligned with opinion polls and therefore had already been factored into the markets although this was beneficial to domestically-focused UK mid-cap equities over more internationally-focused UK large caps. In France, the French President Emmanuel Macron called for a snap parliamentary election due to his party's poor performance in the recent European parliament elections, and with increased fears that Le Pen could get into power this pushed French government borrowing costs higher.

Equities

Global equities gained 2.8% over Q2 2024. All equity regions in the portfolios made positive contributions in US dollar terms, except for Japan which detracted slightly due to the continued depreciation in the yen.

Against this backdrop, the Veritas Asia fund was the best performing with a gain of 6.4%, however Fidelity Asia Smaller Companies (+0.4%) was unable to benefit from the region's strength due to its style being out of favour.

Turning to the US, the region was helped by the information technology and communication services sectors. The Vanguard S&P 500 ETF delivered a gain of 5.1%, while GQG Partners and Edgewood Select were short of this at 3.3% and 2.8%, respectively. Mid Cap exposure via Brown Advisory detracted from performance as well as value via Dodge & Cox.

European equities were flat, while UK equities was negative due to unfavourable currency translation effects. We have exited UK equity exposure across all strategies except max growth.

Fixed Income

Global bond markets were initially hurt by renewed concerns about US inflation causing investors to reassess the timing of interest rate cuts. Later, a more conducive market environment was driven by the emergence of softer labour market conditions and encouraging news on inflation.

Overall, this was positive for US TIPS which gained 2.8% and US Treasuries at the front end performed best.

Our strategic bond manager, Vontobel TwentyFour navigated the environment well to provide a return of 1.3%

Alternative Assets

We continue to hold a diverse selection of alternative funds with differentiated drivers of return, and during the quarter these combined to make a positive contribution to our portfolios.

Our three absolute return managers delivered mixed returns ranging from 2.0% to -0.9%, while Invesco Gold was the best performing alternative asset with an increase in 4.9%, benefiting from increased geopolitical concerns and central bank buying.

Turning to real estate, Schroder Global Cities detracted, falling by -3.1%

New Fund spotlight – Polar Capital Global Insurance

Initiated a new position in the above fund on the 1st June 2024

- We view the underwriting environment for insurance companies as attractive.
- Insurance is a lagged business, where contracts written today typically take 12 months to be recognised from a revenue perspective and underwriting profits take even longer to pass through. This allows visibility into likely near-term underwriting margins.
- Historically, global insurance companies have tracked book value growth and Polar Capital expect over the next 12-months **book value growth to be around 16%**.
- Industry returns are highly dispersed which rewards good stock pickers (not an industry for an ETF) – see below outperformance.
- Non-life insurance is not a discretionary purchase, it is often required by law
- Demand is less sensitive to macroeconomic conditions and historically has offered defensive characteristics in challenging financial markets
- In an increasingly global, complex world with accelerating technologies, the value of insurance in helping to manage risk is rising
- Industry is significantly less vulnerable to the big disruptors like Alphabet, Amazon and Uber
- The non-life insurance sector has a role to play in the transition to a green economy

Past performance is not indicative or a guarantee of future returns.

Important information

Always remind your clients that the value of investments and the income derived from it can go down as well as up and investors can get back less than they originally invested. Past performance is not a guide to the future. .

Funds which invest in specific sectors may carry more risk than those spread across a number of different sectors. In particular, gold, technology and other focused funds can suffer as the underlying stocks can be more volatile and less liquid.

Bonds issued by major governments and companies will be more stable than those issued by emerging markets or smaller corporate issuers; in the event of an issuer experiencing financial difficulty, there may be a risk to some or all of the capital invested. Please note that historical or current yields should not be considered a reliable indicator of future performance.

Targeted absolute return funds do not guarantee a positive return and you could get back less than you invested, much like any other investment. Additionally, the underlying assets of targeted absolute return funds generally use complex hedging techniques through the use of derivative products.

Due to their nature, specialist funds can be subject to specific sector risks. Investors should ensure they read all relevant information in order to understand the nature of such investments and the specific risks involved.

Different funds carry varying levels of risk depending on the geographical region and industry sector in which they invest. You should make yourself aware of these specific risks prior to investing.
